Multiple Choice Questions

1. Which of the following statements is false?
   A. Disclaimers are clues that a product is not likely to live up to your expectations or the manufacturer’s claims.
   B. The RDN credential is legally protected.
   C. A person with a PhD who promotes drinking vinegar as the cure for lung cancer is practicing quackery.
   D. According to scientific research, most dietary supplements provide considerable health benefits.

Bloom’s Level: 2. Understand
Learning Outcome: List characteristics of reliable sources of nutrition information.
Section: 02.03
Topic: Dietary supplements
Topic: Evaluating nutrition information
2. Which of the following statements is true?
A. Medicinal herbs must undergo testing for safety and effectiveness by the FDA before they can be marketed.
B. The FDA can recall a dietary supplement when there is evidence that it is harmful.
C. Manufacturers of dietary supplements must inform the FTC about negative health reports that may have resulted from the use of their products.
D. The EPA regulates the labeling of dietary supplements.

Topic: Dietary supplements
Chapter 02 - Evaluating Nutrition Information

3.

Which of the following statements is true?

A. Dietary recommendations are generally based on the findings of one team of nutrition researchers.

B. Since 1970, nutrition information has undergone few updates, because scientists have discovered all of the nutrients and determined their functions.

C. It is not unusual for similar studies, especially those involving human subjects, to have different findings.

D. The results of one study are usually enough to convince nutrition scientists to adopt new ideas about nutrition-related topics.

Bloom’s Level: 1. Remember
Bloom’s Level: 2. Understand
Learning Outcome: Discuss the importance of peer review.
Learning Outcome: Distinguish between correlation and causation in regard to interpreting the results of scientific studies.
Section: 02.02
Topic: Scientific method
4. Which of the following statements is true?

A. Since 1995, nutrition information has undergone few updates, because scientists have discovered all of the nutrients and determined their functions.

B. A scientist's professional affiliations and sources of financial support may influence his or her research findings.

C. The results of one study are usually enough to convince the majority of nutrition scientists to adopt new ideas about nutrition-related topics.

D. Dietary recommendations are generally based on the findings of one well-respected team of nutrition researchers.

Bloom's Level: 1. Remember
Bloom's Level: 2. Understand
Learning Outcome: Discuss the importance of peer review.
Section: 02.02

5.
Which of the following statements is true?

A. Scientific studies to investigate the same question can have different findings.

B. Dietary recommendations are generally based on the findings of one team of nutrition researchers.

C. Since 1970, nutrition information has undergone few updates, because scientists have discovered all of the nutrients and determined their functions.

D. When interpreting results of their studies, researchers generally seek to include some bias into their analyses.

6.
A group of scientists suspects that certain dietary practices are partially responsible for different rates of hypertension among adults of different ethnic/racial groups. To test their hypothesis, the researchers examine data concerning the different population groups’ hypertension rates and their past dietary practices. This research is a _____ study.

A. retrospective
B. case-control
C. prospective
D. hypothetical

Chapter 02 - Evaluating Nutrition Information

7.

A group of registered dietitians is planning to conduct a scientific study to investigate the effects of eating honey on school-age children's behavior. At first, the researchers will ______.

A. gather data

B. analyze the hypothesis

C. identify relationships between variables

D. make observations

*Bloom’s Level: 1. Remember
Learning Outcome: Describe the typical steps that scientists generally use to investigate whether a disease has a nutrition-related cause.
Learning Outcome: Distinguish between correlation and causation in regard to interpreting the results of scientific studies.
Section: 02.02
Topic: Scientific method*
8.

A medical researcher reads an article in *Today's Health-Conscious Woman* magazine about the benefits of using the phytochemical *capsaicin* to treat knee pain. She asks 10 people with arthritic knees to rub a cream that contains the phytochemical on their knee joints for 2 weeks. At the end of the 2 weeks, the researcher asks the subjects whether their knee pain improved, stayed about the same, or worsened during the treatment period. After collecting responses from the people, the researcher reports the results of her study during a popular TV show that is hosted by a doctor. Based on this information, which of the following statements is true?

A. The researcher used a standard scientific design for research involving human subjects.

B. The researcher reviewed scientific literature regarding the use of capsaicin to treat knee pain.

C. The researcher subjected the results of her study to peer review.

D. The researcher did not divide the subjects of her study into control and treatment groups.

10.

According to the observations of a nutrition scientist, laboratory mice are healthier when their diet contains physiological levels of vitamin D than when their diet lacks the micronutrient. The scientist hypothesizes that mice will be less likely to develop cancer when they consume a diet that supplies megadoses of vitamin D. Based on this information, the scientist is ready to ______.

A. set up an experimental epidemiological study to test the vitamin D and cancer hypothesis in mice

B. plan a retrospective study involving at least 5,000 laboratory mice to test the vitamin D and cancer hypothesis in mice

C. design a double-blind study to test the vitamin D and cancer hypothesis in mice

D. conduct a controlled laboratory experiment to test the vitamin D and cancer hypothesis in mice

13.

A scientist adds 5 mcg of the mineral cadmium to the daily diet of 100 4-week-old laboratory mice. After 12 weeks, the researcher weighs and takes blood samples from each mouse. According to her findings, the mice lost weight during the 12-week period, and they have abnormal levels of certain hormones in their blood. Based on this information and your knowledge of scientific research, what would you tell the researcher about her findings?

A. The findings need to be summarized in a research article for submission to a peer-reviewed nutrition journal.
B. The findings are not meaningful or valid because of the way she designed her study.
C. She needs to conduct more tests on the animals' blood, because her findings are incomplete.
D. Her results are very interesting, and she should report her findings to nutrition scientists, so they can repeat her study and confirm the results.

14. A nutrition researcher adds 30 mg of the mineral iron to the daily diet of 50 4-week-old laboratory mice. After 10 weeks, the scientist takes blood samples from each mouse. According to his findings, the mice developed abnormal levels of certain enzymes in their red blood cells. Based on this information and your knowledge of scientific research, what would you tell him?

A. He should call a press conference and report his findings to the public, so they can avoid consuming excess iron.
B. He should consider his findings as an observation and redesign the study to include a control group.
C. He should prepare a research article that describes his study and its results for submission to a peer-reviewed nutrition journal.
D. He should report his findings to other nutrition scientists, so they can repeat his study and confirm the results.

Having a control group enables researchers to ______.

A. provide specific treatments to participants of the group

B. explore possible hypotheses for future research efforts

C. compare findings of the control group with those of the experimental group

D. avoid using harmful interventions when testing control subjects' responses

*Bloom's Level: 1. Remember
Learning Outcome: Explain the importance of having controls when performing experiments.
Section: 02.02
Topic: Scientific method*
Phil is a participant in a study designed to examine the effects of taking a dietary supplement on muscle tissue development. Phil suspects he is in the experimental group, because he is certain his muscles are bigger and stronger as a result of taking the product supplied by the researchers. When the study is completed, Phil learns that he did not receive the dietary supplement. Phil thinks the researchers made a mistake—he is certain his muscle mass increased while he took the supplement. According to this information, Phil's belief that his physical condition improved while he participated in the study is an example of ______.

A. human subject bias

B. participant fatigue

C. an anecdotal report

D. the placebo effect

Bloom's Level: 2. Understand

35. Which of the following observations is an example of a positive correlation?
A. When a group of children increases their physical activity levels, the percentage of the children who contract cold infections decreases.
B. When a population's intake of green tea increases, the percentage of lung cancer cases in that population decreases.
C. When women gain less weight than average during pregnancy, the birthweights of their babies tend to be lower than average.
D. When members of a population consume fewer fruits and vegetables, their risk of high blood pressure increases.

36. Which of the following observations is an example of an inverse correlation?
A. When population increases its daily consumption of whole-grain products, the population's frequency of daily bowel movements increases.
B. As a population's intake of beta-carotene increases, the population's tissue levels of vitamin A increase.
C. Children who consume 3 cups of vitamin D milk daily develop stronger bones than children who drink fewer than 3 cups of vitamin D milk each day.
D. Women who smoke 5 or more cigarettes each day during pregnancy are more likely to give birth to underweight babies than women who smoke fewer than 5 cigarettes a day during pregnancy.
37. Which of the following observations is an example of a positive correlation?

A. When teenage girls increase their intake of iron-rich foods, the percentage of the girls who have iron deficiency decreases.

B. When a population consumes more fruits and vegetables, the percentage of people in that population with scurvy decreases.

C. When a group of 6-year-old children increase their physical activity level to 60 minutes a day, the children's muscle mass increases.

D. When older adults increase their daily intake of vitamin D, the percentage of the adults that develops infections decreases.

Section: 02.02  
Topic: Scientific method
41. Which of the following observations is an example of a negative (an inverse) correlation?

A.
When a group of people decreases their physical activity levels, the percentage of people in the group with healthy levels of body fat decreases.

B.
When a group of older adults increases their intake of high-fiber foods, the percentage of people in the group who develop intestinal cancer decreases.

C.
When a group of adults increases their intake of fruits and vegetables, the percentage of people in the group who have high blood levels of vitamin C levels increases.

D.
When a group of children eat more sugary foods, the percentage of children in the group who develop two or more decayed teeth increases.
42. Scientists conduct a study in which 100 adults with chronic diarrhea are divided into 2 groups of 50 people. One group is given a supply of yogurt that contains a certain kind of bacteria, and the other group is given yogurt that is bacteria free. The study's participants and researchers do not know which group of subjects has the bacteria in the yogurt and which group does not. The scientists instruct the participants to eat the entire 8 ounces of yogurt once a day for a month and record their bowel habits. This is an example of a(n) ____ study.

A. hypothetical  
B. uncontrolled  
C. double-blind  
D. retrospective
